

CollectLogix™

Maximize Cash Collections with AI-based Workflows

CollectLogix™ is a next generation workflow tool specifically designed to maximize revenue cycle productivity. All A/R is prioritized according to a proprietary 11-factor algorithm, and team members are assigned account workflows according to algorithm scoring. The CollectLogix™ workflow tool boosts productivity and ensures account resolution efficiency with a one-touch approach powered by computer-assisted guidance. Built-in tools, such as scenario-based interactive standard operating procedures, minimize job training requirements while integrated document management systems reduce time and labor for account turn-around. Even more, CollectLogix™ uses built-in technology to focus staff on accounts that require action.

Patented, AI-based account assignment and robotic process automation (RPA) dynamically groups accounts to maximize team members' time management. CollectLogix™ keeps your team moving with batched queues that can differentiate between claim resolution activities that require phone calls to payers and those that can be performed independently. The two-pronged approach ensures that time is used wisely – associates can make the most of phone calls with payer representatives and always have independent work to do while waiting on hold.

CollectLogix™ is the ultimate workflow productivity tool

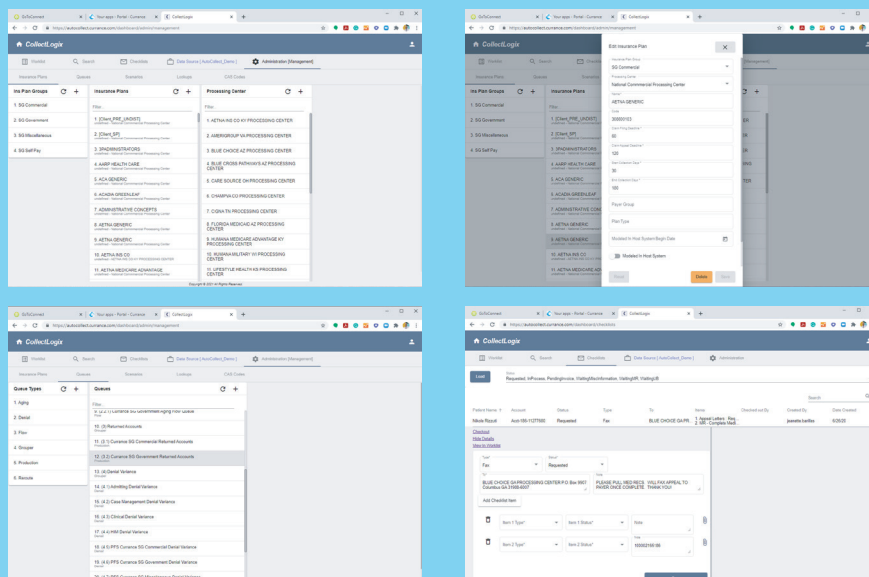

CollectLogix™ gives managers a birds-eye view of claims adjudication and resolution. Its automatic account status updates, pulled directly from payers or remittance advice, ensure operational metrics, reporting, and dashboards provide up-to-the-minute information. Resource decisions can be made quickly using predictive measures to guide managers in optimizing team members' effectiveness.

Quickly identify people and process improvements

With CollectLogix™, actionable root-cause feedback and identification of improvement opportunities are at your fingertips.

CollectLogix™ Features

- Patented 11-factor algorithm prioritizes accounts
- AI-driven dynamic work queue assignment to maximize Rev-Cycle Yield
- Suppression of non-essential activities
- RPA gathers payer data for up-to-the-minute intelligence
- Underpayment identification, workflows, and analytics
- Scenario-based, interactive job aids
- Real-time collection performance
- Continuous focus on problem areas
- Account liquidation performance
- Individual and team performance

Accelerate net revenue, achieve lowest cost-to-collect

On average, Currance and CollectLogix™ deliver between 7 – 11 days acceleration in payments with a 20-30% labor savings. Continuous analysis of work efforts, payer performance, and bulk handling opportunities steadily improve operations and fine-tune activities. Teams develop problem-solving abilities and a culture of excellence that positions organizations for continued collections success.
